

API-AGRO

DIGITAL SERVICES
COMPANY FOR THE AGRICULTURAL SECTOR

API-AGRO offers a platform to easily spread data and share them with agricultural stakeholders. We support you, data providers and users, with services offer focused on business uses.

The platform delivers access to various assets (datasets and API) improving their visibility (public, restricted or private), their accessibility, their interoperability and their reuse while warranting high level of security and traceability. As a food factory, the platform collects raw materials (data) to set-up refined products, which can be put together or used alone, to be valorized directly in a throng of apps.

Our services

Strat

We accompany you with audit and advisory services to map your data sources and identify priorities for your digital strategy. We can also support your teams on API design and realization to meet as best as possible the expectations of your API customers.

Viz

We offer thanks to our interactive and powerful tools customized visualizations of your data using charts, maps and dashboards to extract and express their full value.

Process

We support you in preparing your data processing, cleaning and matching to standards, technical documentation and high performance hosting in order to release the power of your data and make them fast and easy to use in connection with a high number of existing assets.

Diff

We foster easy and exponential dissemination of your data to swarm business uses and feed your applications and those of your partners in complete control.

Dev

We develop innovative web and mobile applications serving agriculture by using data exchanges and API. Data can be yours, those of your partners or public open data.
